

Glaucoma surgery

Glaucoma can damage the optic nerve that connects the eye to the brain. Reducing pressure in the eye can slow this damage, so glaucoma surgery aims to reduce eye pressure (IOP). Our glaucoma surgeons are highly successful at reducing eye pressure. More than 95% of glaucoma surgeries reduce pressure to low-normal.

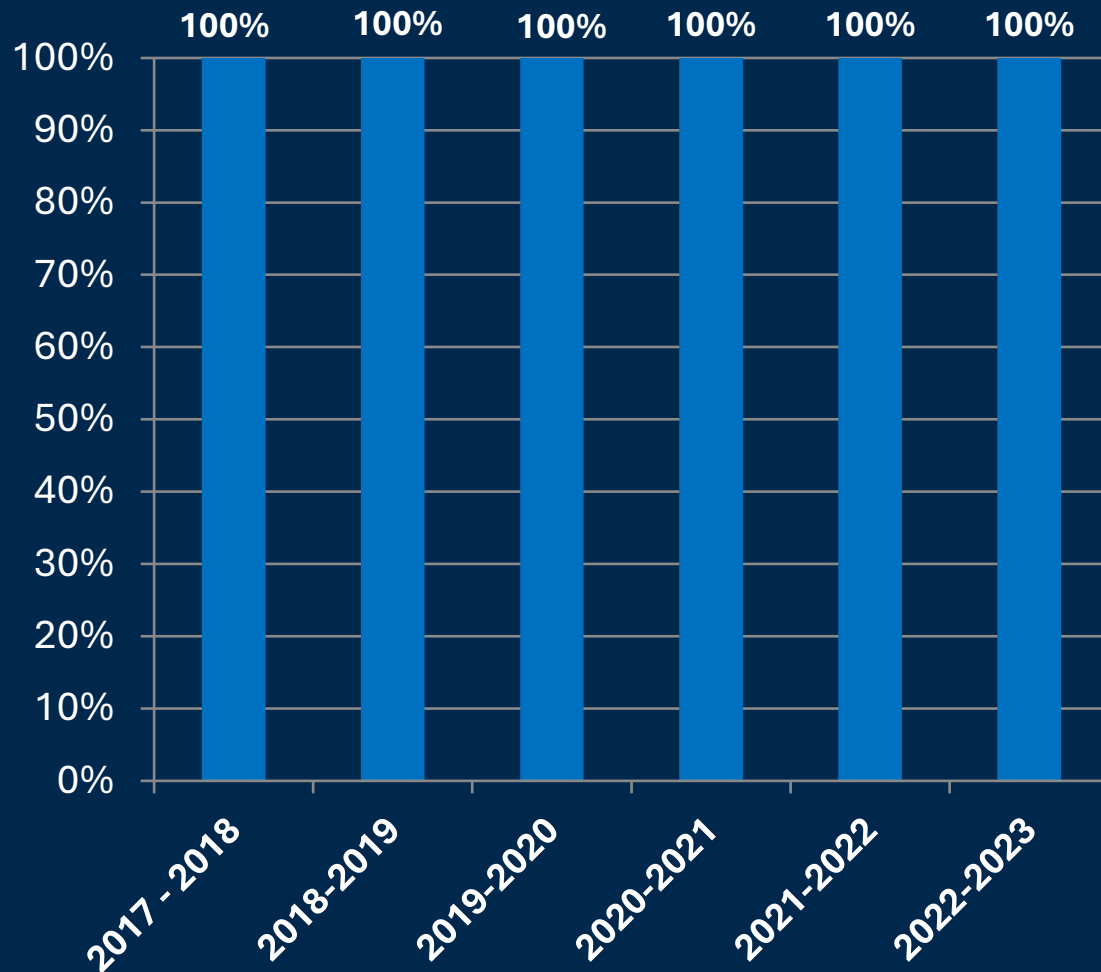

Glaucoma surgery: IOP \leq 17 at 6 months

Average IOP (mmHg) at 6 months

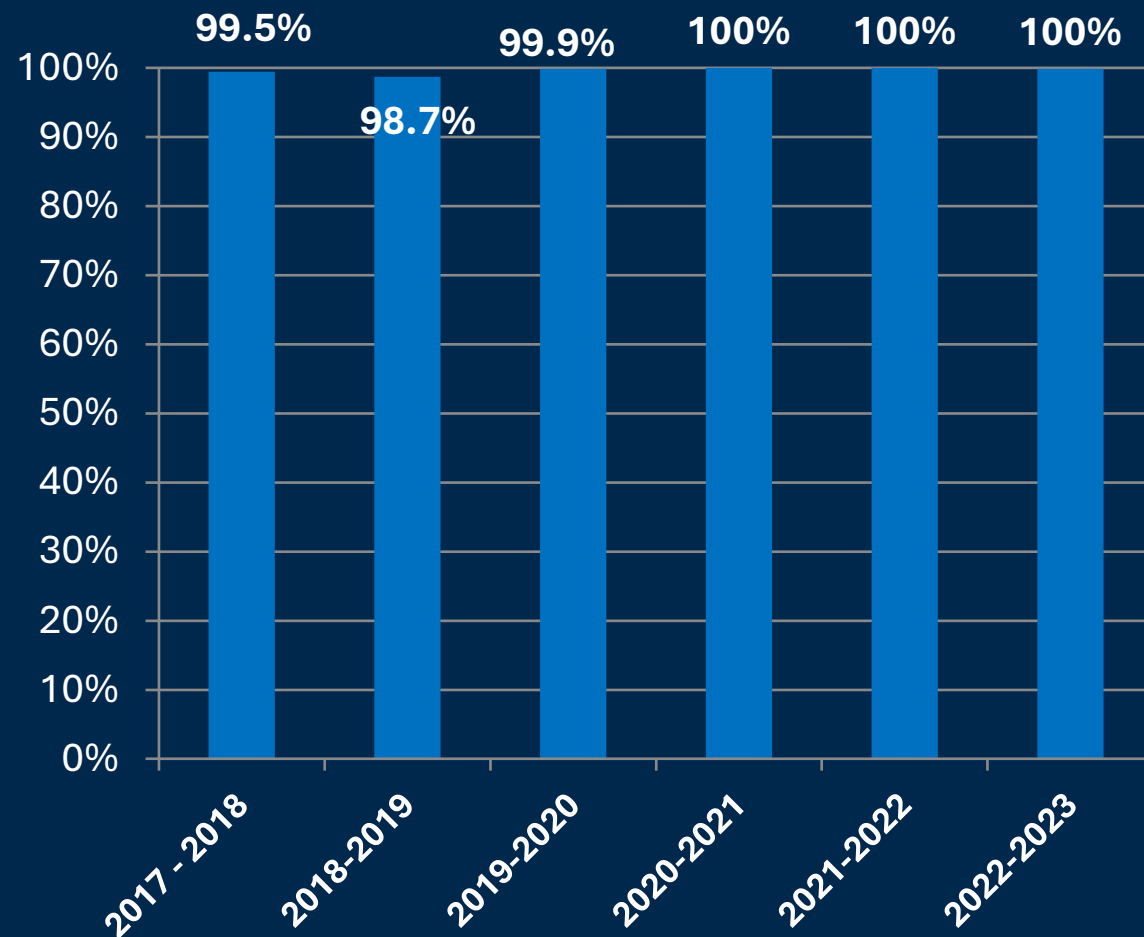

Adherence to primary open angle glaucoma guidelines > New patients

- Our faculty members practice cutting-edge medicine in line with the guidelines from national societies.
- All new and return patients seen in glaucoma clinics with primary open-angle glaucoma (POAG) are treated in accordance with national guidelines.
- # of Physicians: 38
- Average rate per physician: 100%
- Rate per physician range: 100%-100%

Adherence to primary open angle glaucoma guidelines > Returning patients

- Our faculty members practice cutting-edge medicine in line with the guidelines from national societies.
- All new and return patients seen in glaucoma clinics with primary open-angle glaucoma (POAG) are treated in accordance with national guidelines.
- # of physicians: 45
- Average rate per physician: 100%
- Rate per physician range: 99.77%-100%
