

Number of surgical cases

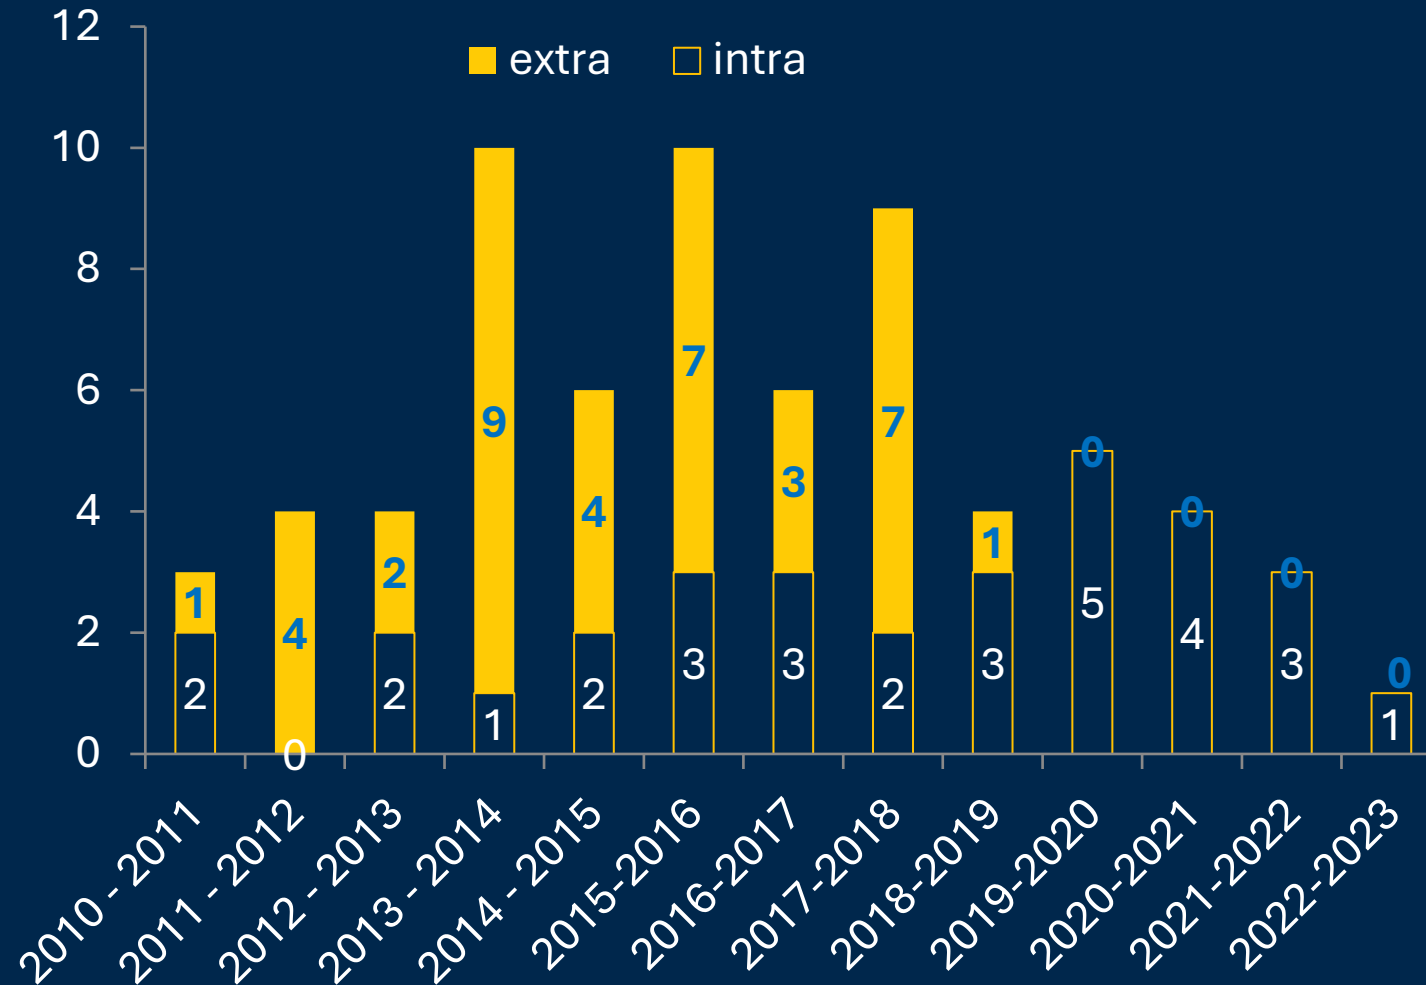

- Kellogg Eye Center performs a high volume of surgeries every year.
- Our high volumes give us the experience needed to maximize patient safety and outcomes.
- Average # cases per surgeon: 159
- Range: 0 – 973

30-Day unplanned reoperation rates

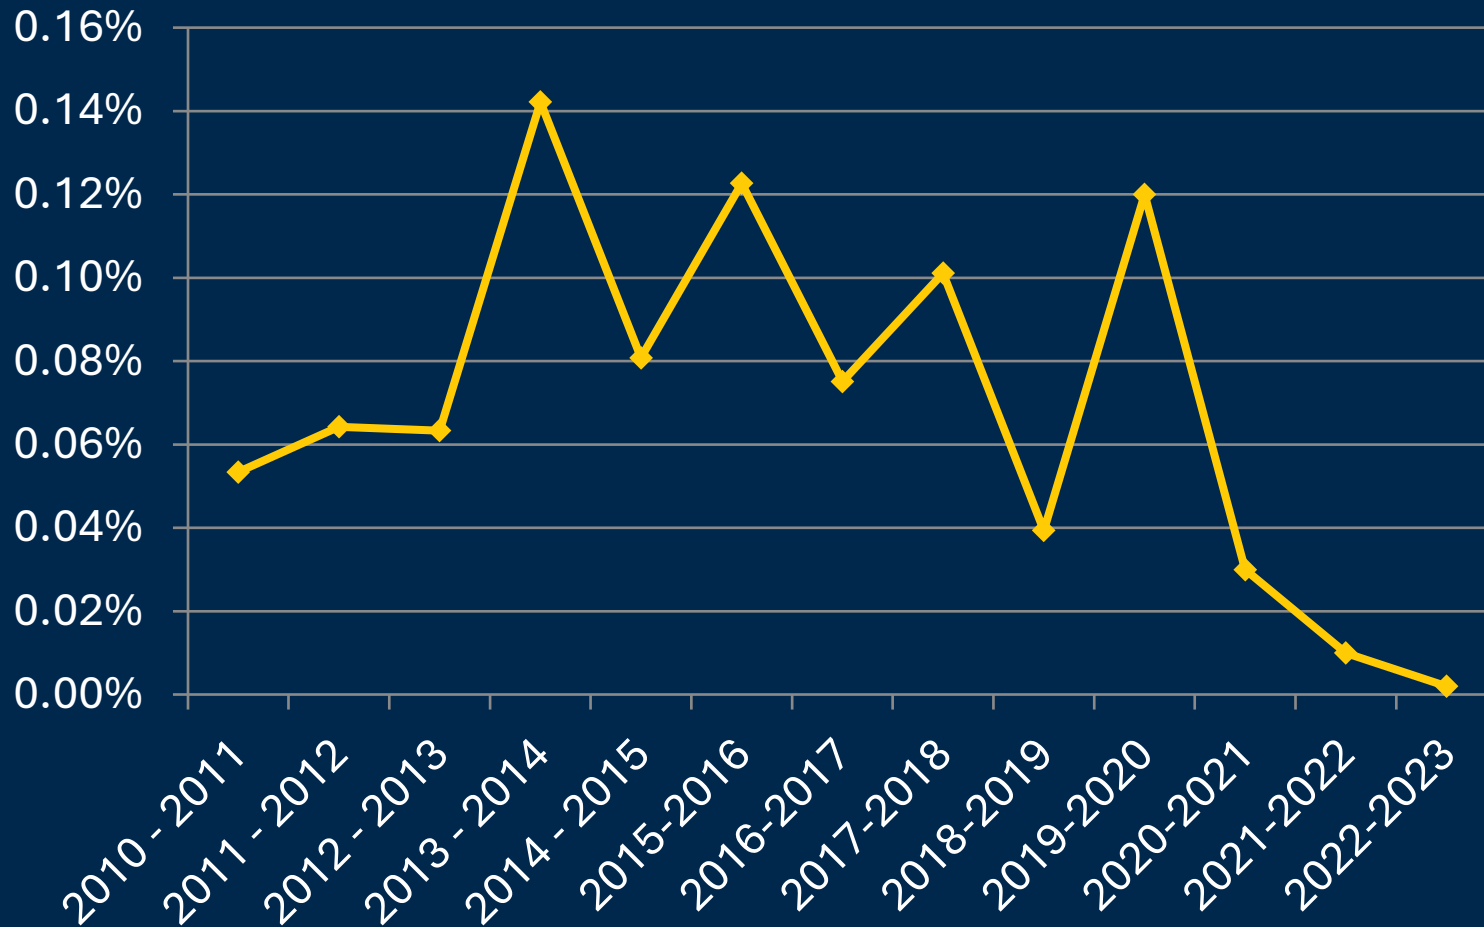

- Occasionally, there can be a need for a second unplanned operation. These reoperations happen less than 1% of the time at Kellogg Eye Center.
- Range: 0 – 6.6%

Post-surgical endophthalmitis/infections

- Infection after eye surgery can put patients at high risk for vision loss. Kellogg Eye Center has extremely low rates of infection after surgery.
- Less than 1 in 10,000 surgeries had an infection afterwards. (1 intraocular, 0 extraocular)

Post-surgical endophthalmitis/infection rates

- Kellogg Eye Center rarely has post-surgical infections.
- Average per surgeon = 0
- Rate per surgeon range = 0 – 0.1%
